Group: A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles

S: in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes

NP: in case that a species is no longer present in the site enter: x (optional)

Type: p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

Unit: i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Caratteristico colle di forma rotonda, che si erge presso Trento nella Valle dell'Adige, formato di calcari dell'eocene, delimitato quasi su tutti i lati da pareti calcaree verticali e da cengie; la vegetazione è data da boschi di caducifoglie termofile (il Doss Trento è il "locus classicus" dell'associazione Orno-Ostryetum), mentre sulle cengie sono presenti lembi di praterie aride, a impronta steppica sui versanti a nord e submediterranea su quelli a sud. Sono presenti habitat di particolare interesse non compresi nell'all.I della direttiva 92/43/CEE, in particolare: boschi dell'Orno-Ostryetum (locus classicus) (60%).

4.2 Quality and importance

Sito di grande importanza ambientale, sia per le caratteristiche geomorfologiche che botaniche e faunistiche, molto rappresentativo per gli ecosistemi forestali del piano collinare. Il sito è inoltre di rilevante importanza per la nidificazione, la sosta e/o lo svernamento di specie di uccelli protette o in forte regresso, e/o a distribuzione localizzata sulle Alpi. Presenza di invertebrati dei boschi di latifoglie del piano basale in buone condizioni di naturalità.
