Group: A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles

S: in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes

NP: in case that a species is no longer present in the site enter: x (optional)

Type: p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

Unit: i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Ampia conoide quasi pianeggiante, formata da depositi alluvionali in prevalenza ghiaiosi, che si trova alla foce dell'Avisio nell'Adige, occupata da vegetazione pioniera dei greti fluviali e da vegetazione ripariale arbustiva e arborea.

4.2 Quality and importance

L'importanza del sito è dovuta alla presenza di un frammento di ambiente ripariale di fondovalle, distrutto quasi ovunque. Il sito è inoltre di rilevante importanza per la nidificazione, la sosta e/o lo svernamento di specie di uccelli protette o in forte regresso, e/o a distribuzione localizzata sulle Alpi. Presenza storica di lepidotteri compresi nell'allegato II e propri di zone umide integre, ora in forte declino. Presenza di invertebrati dell'allegato II che indicano buona naturalità delle acque correnti.
