PF: for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.

NP: in case that a habitat type no longer exists in the site enter: x (optional)

Cover: decimal values can be entered

Caves: for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

Group: A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles
S: in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes

NP: in case that a species is no longer present in the site enter: x (optional)

Type: p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

Unit: i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Le marocche di Dro (bassa Valle del Sarca) sono formate da imponenti ammassi detritici di natura calcarea, di forma e dimensioni variabili, che hanno colmato gran parte del fondovalle; al loro interno si trova un laghetto originatosi per sbarramento da frana. Tutta l'area ha un aspetto quasi desertico, ove la vegetazione colonizza soltanto le porzioni favorevoli con specie pioniere, piccoli lembi di aree prative xeriche, nuclei di vegetazione arbustiva e talvolta forestale (caducifoglie termofile).. Sono presenti habitat di particolare interesse non compresi nell'all.I della direttiva 92/43/CEE: Orno-Ostryetum (10%). Habitat 6210 prioritario (stupenda fioritura di orchidee) con copertura del 9% del sito.

4.2 Quality and importance

Eccezionale ambiente detritico di fondovalle, con un paesaggio di tipo quasi desertico, di grande interesse per i fenomeni di colonizzazione da parte della vegetazione. Il sito è inoltre di rilevante importanza per la nidificazione, la sosta e/o lo svernamento di specie di uccelli protette o in forte regresso, e/o a distribuzione localizzata sulle Alpi. Presenza storica di lepidotteri presenti nell'allegato II.
