S: in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes

NP: in case that a species is no longer present in the site enter: x (optional)

Type: p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

Unit: i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Amena conca volta a solatio situata in destra Adige a monte degli abitati di Nomi e di Savignano. Il substrato è completamente calcareo. Presenta tipica vegetazione dell'orizzonte submontano: prati aridi, boschi termofili, cui si aggiungono due piccole zone umide. Habitat 6210 prioritario (stupenda fioritura di

orchidee) con copertura del 23,76% dei Sito.

4.2 Quality and importance

Area assai interessante dal punto di vista floristico: vi si trovano numerose specie termofile assai rare in Trentino, cui si accompagna una florula paludicola degna di nota (ad es. l'unica stazione nota in regione di Plantago altissima). Si tratta di un biotopo di vitale importanza per la riproduzione di molte specie di anfibi e rettili.
