S: in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes

NP: in case that a species is no longer present in the site enter: x (optional)

Type: p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

Unit: i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Il lago - costituito da due bacini collegati tra loro da un breve canale - occupa il fondo di un'ampia conca (substrato calcareo) che raccoglie gli ultimi influssi mitigatori verso nord del Lago di Garda. A ridosso del lato settentrionale del lago si trova un ambiente termofilo con prati aridi e siepi. Habitat 6210 prioritario (stupenda fioritura di orchidee) con copertura del 8,26% del Sito.

4.2 Quality and importance

Sito a notevole variabilità ambientale e di grande interesse floristico e vegetazionale, dato il degrado cui sono andati incontro in generale gli ambienti umidi situati in aree termofile. Apprezzabili soprattutto la ricca vegetazione acquatica (idrofite), la flora delle sponde e la presenza di prati aridi ricchi di orchidacee. Il sito è inoltre di rilevante importanza per la nidificazione, la sosta e/o lo svernamento di specie di uccelli protette o in forte regresso, e/o a distribuzione localizzata sulle Alpi.
