PF: for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.

NP: in case that a habitat type no longer exists in the site enter: x (optional)

Cover: decimal values can be entered

Caves: for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

S: in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes

NP: in case that a species is no longer present in the site enter: x (optional)

Type: p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

Unit: i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Modesto versante boscato-rupestre (calcare) della fascia montana posto lungo la catena che separa la Val di Non e la Valle dell'Adige. Presenti bosco misto e vegetazione erbacea steppica in corrispondenza dei ciglioni rupestri esposti a sud. Habitat 6210 prioritario (stupenda fioritura di orchidee).

4.2 Quality and importance

Due presenze floristiche di rilievo (*Saxifraga tombeanensis* e *Dracocephalum austriacum*) giustificano l'istituzione del sito. La naturalità generale dell'area è piuttosto elevata. Essendo scarsa l'accessibilità, il sito presenta scarsa vulnerabilità. I lembi di prateria steppica sembrano primari e quindi non soggetti al processo di incespugliamento spontaneo.
