PF: for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.

NP: in case that a habitat type no longer exists in the site enter: x (optional)

Cover: decimal values can be entered

Caves: for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

S: in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes

NP: in case that a species is no longer present in the site enter: x (optional)

Type: p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

Unit: i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with

some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Dolce vallata collocata tra il gruppo del Catinaccio ed il Sasso Piatto. Il substrato è assai vario (basalti e dolomia). Il fondovalle è occupato da ampie praterie solcate dal corso del torrente Duron, lungo il quale si trovano saliceti e piccole torbiere. I versanti, solo in basso con boschi di conifere con cembro, sono coperti da pingui praterie sulla parte basaltica e da vegetazione erboso-rupestre nella parte dolomitica. Sono presenti habitat di particolare interesse non compresi nell'all.I della direttiva 92/43/CEE: Caricetalia fuscae (3%), Caricetalia curvulae (3%).

4.2 Quality and importance

Oltre alla ricchezza floristica e vegetazionale legata alla variabilità del substrato, è da sottolineare l'interesse delle aree umide, che rappresentano la continuazione verso sud del complesso di torbiere, di eccezionale interesse, dell'Alpe di Siusi (BZ). Il sito è di rilevante interesse nazionale e/o provinciale per la presenza e la riproduzione di specie animali in via di estinzione, importanti relitti glaciali, esclusive e/o tipiche delle Alpi.
