S: in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes

NP: in case that a species is no longer present in the site enter: x (optional)

Type: p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Massiccio granitico del Trentino occidentale con ghiacciai e grandi depositi morenici, laghetti alpini, vasti accumuli detritici; ad oriente i versanti del massiccio si fanno sempre meno acclivi, per cui sono presenti torbiere e lembi di foreste di conifere su torba. La vegetazione é formata da foreste di latifoglie (faggete) e di conifere (abete rosso e larice, con nuclei di pino cembro); sopra il limite del bosco sono diffusi ovunque pascoli alpini e brughiere subalpine.

4.2 Quality and importance

Esempio di gruppo montuoso cristallino ricco di ghiacciai, cordoni morenici, laghetti alpini e ampi versanti boscosi, interrotti da radure prative. Il sito è di rilevante interesse nazionale e/o provinciale per la presenza e la riproduzione di specie animali in via di estinzione, importanti relitti glaciali, esclusive e/o tipiche delle Alpi.
