PF: for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430)

enter "X" in the column PF to indicate the priority form.

NP: in case that a habitat type no longer exists in the site enter: x (optional)

Cover: decimal values can be entered

Caves: for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

Group: A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles

S: in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes

NP: in case that a species is no longer present in the site enter: x (optional)

Type: p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

Unit: i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Vasta area di torbiere boschi sulle pendici del gruppo della Presanella, in parte di pendio , in parte pianeggiante in parte di dossi boscati, con diffuse radure naturali nella foresta di abete rosso; la vegetazione è data da un complesso di numerose associazioni turficole, rare in tutto il versante meridionale delle Alpi. Sono presenti anche alcuni lembi di foresta di abete rosso su torba (torbiera boscata). Sono tra l'altro presenti torbiere basse fonticole a prevalenza di Graminacee e Ciperacee e con aree di sfagneto e numerose emergenze di autentica torbiera alta con elevati indici di acidità del substrato.; Nelle parti più a Sud si notano estese mughete, sia di versante che di torbiera.

4.2 Quality and importance

Complesso di torbiere sparse nella foresta di conifere, con specie molto rare, in un contesto ambientale ancora intatto e di grande bellezza, che ricorda i paesaggi nordici. Si tratta di un insieme di biotopi di vitale importanza per la riproduzione di molte specie di anfibi e rettili, nonché di interesse ornitologico per la presenza di specie tipiche dell'avifauna alpina. Notevoli per interesse ai fini della direttiva europea le aree di interdigitazione fra foresta boreale e formazioni torbose.
