NP: in case that a habitat type no longer exists in the site enter: x (optional)

Cover: decimal values can be entered

Caves: for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

S: in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes

NP: in case that a species is no longer present in the site enter: x (optional)

Type: p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

Unit: i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Massiccio calcareo prealpino poco antropizzato. Il sito è incentrato sulla selva Val Gulva, dominata da boschi misti, e sull'ondulato altipiano sommitale, dove prevalgono praterie alpine. Sul versante settentrionale del Colsanto, caratteristico rilievo del massiccio calcareo del Pasubio, in ambiente subalpino, domina una pecceta subalpina con cembri sparsi.

4.2 Quality and importance

Area ad elevata variabilità ambientale, poco antropizzata e a naturalità elevata. Apprezzabile contingente di specie endemiche e di rarità floristiche. Il sito è di rilevante interesse nazionale e/o provinciale per la presenza e la riproduzione di specie animali in via di estinzione, importanti relitti glaciali, esclusive e/o tipiche delle Alpi. Uno dei caratteri salienti del sito è dato dalla presenza relitta del pino cembro, l'unica nota nelle Prealpi sudorientali. Area di interesse internazionale per il transito di molte specie migratrici a medio e lungo raggio nel periodo tardo estivo e autunnale (migrazione post-riproduttiva).
