PF: for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.

NP: in case that a habitat type no longer exists in the site enter: x (optional)

Cover: decimal values can be entered

Caves: for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

Group: A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles
S: in case that the data on species are sensitive and therefore have to be blocked for any public

access enter: yes

NP: in case that a species is no longer present in the site enter: x (optional)

Type: p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

Unit: i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

3.3 Other important species of flora and fauna (optional)

Other Site Characteristics

Area montano-dolomitica situata in ambiente marcatamente prealpino, caratterizzata da guglie e vasti ghiaioni intervallati da praterie alpine, mughete, estesi boschi di latifoglie e di abete bianco, nonché pascoli e praterie regolarmente alpeggiati.; nelle parti più basse sono presenti significativi lembi di faggeta di impronta illirica e molti valloni. Il sito comprende le piccole dolomiti della Vallarsa, il sottogruppo del Baffelan, la testata e il versante sinistro della val d'Ala ed i pascoli alpestri della Lessinia.

4.2 Quality and importance

Area a naturalità elevata che rappresenta il limite occidentale di numerose specie a gravitazione orientale. E' presente un significativo gruppo di specie endemiche. Il sito è di rilevante interesse nazionale e/o provinciale per la presenza e la riproduzione di specie animali in via di estinzione, importanti relitti glaciali, esclusive e/o tipiche delle Alpi. Presenza di invertebrati legati a boschi maturi e integri di latifoglie, con alcune specie floristiche di rilievo. Nei boschi montano-mesofili sono tra l'altro assai diffusi il tasso e l'agrifoglio. Nella parte più ad ovest estese aree pascolive tuttora regolarmente gestite con alpeggio di bovini.
