Other Site Characteristics

L' area, situata nella fascia prealpina sud occidentale del Trentino, comprende due vasti circhi glaciali con lariceti e formazioni ad ontano verde; nelle zone pianeggianti del fondo dei circhi e sui versanti sono sviluppate numerose torbiere basse fonticole a Ciperacee e un laghetto bordato da una fascia di magnocariceti. Sono presenti habitat di particolare interesse, per l'ambiente alpino, tanto di matrici calcaree, quanto di quelle vulcaniche. Diffuso verso ovest, presso il confine di provincia, il lariceto rado con ampie praterie interrotte da pareti rocciose.

4.2 Quality and importance

Ambiente alpino quasi intatto, con torbiere e un piccolo lago. Area di interesse internazionale per il transito di molte specie migratrici a medio e lungo raggio nel periodo tardo estivo e autunnale (migrazione post-riproduttiva). Si tratta di un biotopo di vitale importanza per la riproduzione di molte specie di anfibi e rettili. Rarità floristiche e presenza di specie endemiche a baricentro occidentale costituiscono il pregio del sito in questione. Rarità floristiche e presenza di specie endemiche a baricentro occidentale, come *Primula glaucescens*, costituiscono il pregio del sito in questione.
