PF: for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.

NP: in case that a habitat type no longer exists in the site enter: x (optional)

Cover: decimal values can be entered

Caves: for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

Group: A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles

S: in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes

NP: in case that a species is no longer present in the site enter: x (optional)

Type: p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

Unit: i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Massiccio di natura granitica del Trentino occidentale, con vasti ghiacciai e solcato in tutte le direzioni da lunghe valli glaciali, ricche di acque; i versanti sono ricoperti da vaste foreste di conifere (abete rosso e larice, con nuclei di pino cembro) e di latifoglie (faggio), interrotte da radure prative; sul fondovalle e nei ripiani dei circhi glaciali sono frequenti torbiere e laghetti. Oltre il limite del bosco sono diffusi ovunque i pascoli alpini. Sono presenti habitat di particolare interesse non compresi nell'all.I della direttiva 92/43/CEE, in particolare: Calamagrostio villosae - Abietetum e Galio odorati - Abietetum, Caricion fuscae, Caricetalia curvulae, Calluno - Genistion.

4.2 Quality and importance

Stupendo esempio di acrocoro alpino cristallino, vastamente glacializzato, da cui si diramano profonde vallate, con tutta la tipologia vegetazionale dal limite delle nevi fino al fondovalle. Il sito è di rilevante interesse nazionale e/o provinciale per la presenza e la riproduzione di specie animali in via di estinzione, importanti relitti glaciali, esclusive e/o tipiche delle Alpi. Sono presenti specie di invertebrati dell'Allegato 2 legate a boschi in buone condizioni di naturalità.
